

Tuesday 07th July 2026 (16th Ashadha 1948 Saka)

Summary of observations recorded at 0830 hours IST: The Southwest Monsoon has further advanced into some more parts of north Arabian Sea, remaining parts of Gujarat and some more parts of Rajasthan and Haryana. The Northern Limit of Monsoon passes through 24.5°N/65°E, Barmer, Jodhpur, Rajgarh (Dist. Churu), Bhatinda and 32.5°N/70°E. Conditions are favourable for further advance of southwest monsoon into remaining parts of North Arabian Sea, Rajasthan, Haryana and Punjab, and hence entire country during next 2-3 days. The Depression over south Jharkhand and adjoining north interior Odisha moved west-northwestwards and lay centred at 1130 hrs IST of today, the 6th July 2026, over south Jharkhand and adjoining north Chhattisgarh near latitude 23.1°N and longitude 84.4°E. It moved west-northwestwards and lay centred at 1730 hrs IST of today, the 6th July 2026, over north Chhattisgarh and adjoining areas of southeast Uttar Pradesh and northeast Madhya Pradesh, near latitude 23.8°N and longitude 82.7°E. It weakened into a **Well Marked Low Pressure area** over east Madhya Pradesh and neighbourhood at 0530 hrs IST of today. It persisted over the same region at 0830 hrs IST of today. The associated cyclonic circulation extended upto 9.6 km above m.s.l. tilting southwards with height. It is very likely to move slowly west-northwestwards across Madhya Pradesh and adjoining areas of southwest Uttar Pradesh and weaken during next 24 hours. The **seasonal trough** at mean sea level from southwest Rajasthan to eastcentral Bay of Bengal ran from southwest Rajasthan to eastcentral Bay of Bengal across the centre of **Well Marked Low Pressure area** over east Madhya Pradesh, north Chhattisgarh, south Jharkhand & north Odisha and extends upto 1.5 km above m.s.l. at 0530 hrs IST of today morning. It ran from southwest Rajasthan to Bangladesh across the centre of **Well Marked Low Pressure area** over East Madhya Pradesh, North Chhattisgarh, Jharkhand & Gangetic West Bengal. An **upper air cyclonic circulation** lay over Southwest Rajasthan & neighbourhood at 1.5 km above m.s.l. The **shear zone** lay as a trough from Northeast Arabian sea to Bangladesh across centre of **Well Marked Low Pressure area** over East Madhya Pradesh, North Chhattisgarh, Jharkhand & Gangetic West Bengal between 0.9 & 7.6 km above m.s.l. The **off-shore trough** at mean sea level from south Gujarat to North Kerala coast now runs from south Gujarat to central Kerala. The **Western Disturbance** as a trough in middle & upper tropospheric westerlies with its axis at 5.8 km above m.s.l. roughly along Long. 72°E to the north of Lat. 30°N persisted.

Maximum Temperature Departures (as on 06-07-2026): markedly above normal (> 5.1°C) at isolated places over Tamil Nadu, Puducherry & Karaikal. **appreciably above normal (3.1°C to 5.0°C)** at few places over West Uttar Pradesh. **above normal (1.6°C to 3.0°C)** at most places over Assam & Meghalaya; at isolated places over East Uttar Pradesh. **near normal (-1.5°C to 1.5°C)** at many places over Lakshadweep; at most places over Himachal Pradesh; at few places over Coastal Andhra Pradesh & Yanam and Kerala & Mahe. **The highest maximum temperature of 43.2°C was reported at Sriganganagar (Rajasthan).**

The Southwest Monsoon has been Vigorous over Saurashtra & Kutch, Madhya Maharashtra and active over Jharkhand, east Madhya Pradesh, Gujarat Region and Konkan & Goa.

Total 296 Station reported rainfall today whose normals are available. Total rainfall is 435.7 cm with normal station total is 277.6 cm.
